

# OziExplorer PC & Android Combined Course

This course is designed to allow existing users use their software fully and efficiently to make their trips out in the bush more enjoyable.

Your instructor is Rod Durston. His background is in Surveying, then progressed to selling, installing, and supporting surveying software, owning a large national computer company before selling the business and retiring. He has been 4WDing for 30 years and using navigation systems for the last 15 years. He is not connected to any software or hardware supplier, so opinions are based on experience, not company bias.

The course is designed for someone who already has OziExplorer PC and/or Android versions (and some versions of Hema maps) or who is ready to buy.

## PC Version

- Overview of software and hardware requirements
- Supported map types and map sources both free and paid
- Creating waypoints, tracks and routes
- Creating Projects
- Importing data from external sources
- Uploading to Tablet

## Android Version

- Overview of software and hardware requirements
- Installation procedure.
- Configuration settings
- Supported map types and map sources both free and paid
- Creating waypoints, tracks and routes
- Uploading to Tablet
- Navigating

## Requirements

None, but you can bring along your own laptop and tablet to use during the course.

## Duration

Allow around 4 hours but this could go longer depending on the number of questions to be answered.

## What's Provided and What to Bring

- Some printed course material is provided.
- Bring your laptop, charger, pen and paper.
- Phone for Hotspot internet connection if required.
